Does any reading separate a real fine-tune from its shuffled twin? Filed outcome: rival A
case label
writes nothing
share, real (gap -0.02, not apart)
share, twin
steering, per word, real (gap -0.51, apart)
steering, per word, twin
steering, pooled, real (gap +0.10, apart)
steering, pooled, twin
neurons, k 64, real (gap -0.01, inert)
neurons, k 64, twin
neurons, k matched, real (gap -0.01, inert)
neurons, k matched, twin
0
1
share of the fine-tune's gain in the label contrast
repeat label
writes nothing
share, real (gap -0.09, not apart)
share, twin
steering, per word, real (gap -1.09, apart)
steering, per word, twin
steering, pooled, real (gap -0.01, inert)
steering, pooled, twin
neurons, k 64, real (gap +0.01, inert)
neurons, k 64, twin
neurons, k matched, real (gap -0.00, inert)
neurons, k matched, twin
