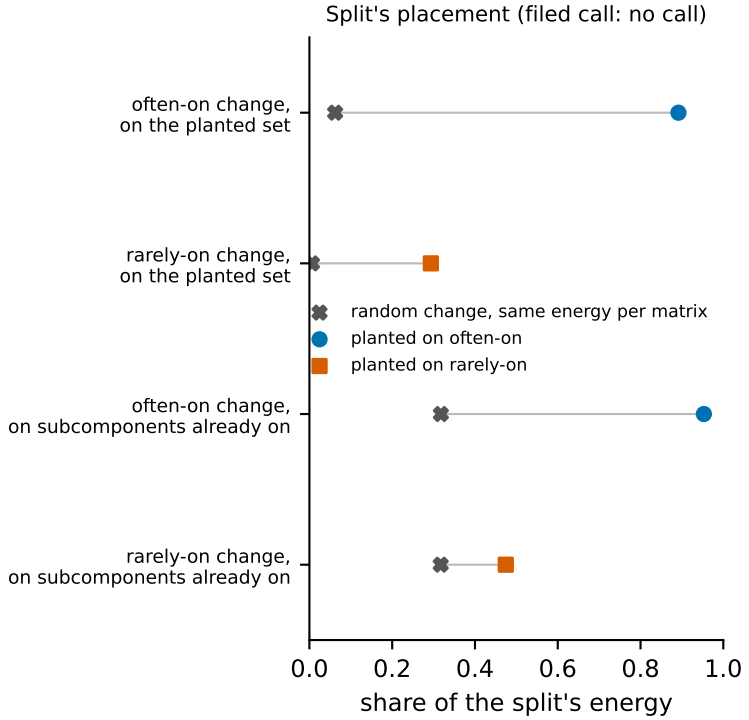
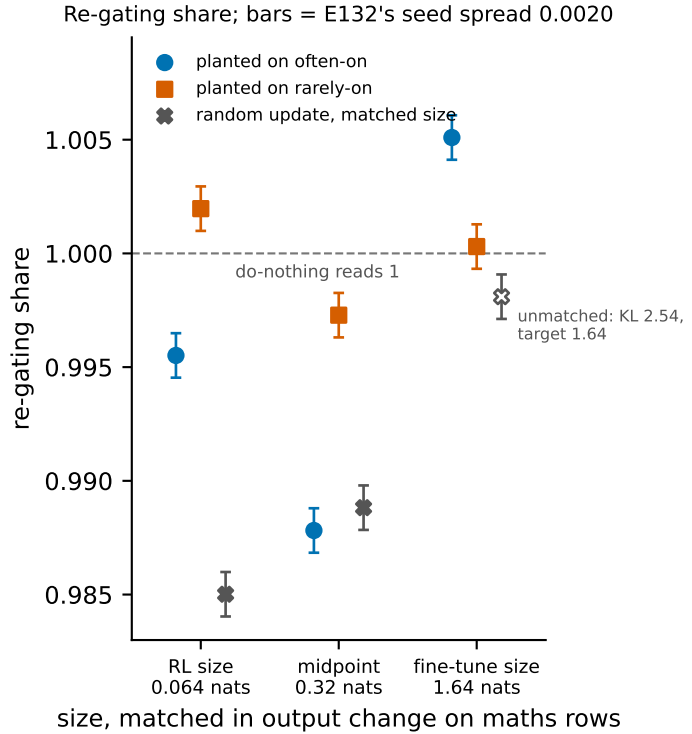
The split returns the often-on set, only partly the rarely-on set;
the re-gating share stays between 0.985 and 1.006 for all nine states





Left: 648 subcomponents per planted set over 28 down_proj matrices, one split per kind. Right: 9 states, 128 maths rows of 256; random at the fine-tune size is unmatched in size. New decomposition p-9707d6ff.
