
67M model. Each cell: side built to reuse minus side built to be new; shares and log10 prior a difference of seed means, size and rank log10 of the ratio. Colour capped at 1. Box = sides apart by the cell's rule (seed ranges, a run's filed call, or for the overlap columns the wider side's seed range). x = not run. Seeds per side 1 to 8; part 1 two seeds a side. Neuron cells on the two label twins were read on 2026-11-11.
