Does the rewiring share read the sum-parity fine-tune below the last-number-odd control?
one site (the definition's measure)
reading: clearly below
cut-off 0.5
planted ceiling
control: last number odd
(saved, E154/E156)
new: sum parity
planted floor
0.0
0.5
1.0
best found rewiring share (dots: seeds)
two sites, in order
reading: clearly below
cut-off 0.5
planted ceiling
control: last number odd
(saved, E154/E156)
new: sum parity
planted floor
0.0
0.5
1.0
best found rewiring share (dots: seed
2 seeds per fine-tune (control: E154's saved fine-tunes, not re-read); one planted target each for ceiling and floor; d on 100,000 read
windows (held-out number pairs and far windows)
